Case Presentation 1

Natasha Wojcik

The Princess Alexandra Hospital, Brisbane, Queensland, Australia

Link: (GPS) Case 1a. Cecum/Natasha Wojcik

Link: (GPS) Case 1b. Transverse colon/Natasha Wojcik

Biopsies, bugs and balancing acts

Clinical History:

(Case 1a & Case 1b): A 54 year old female presents with chronic diarrhoea and weight loss 3 months after elective cholecystectomy complicated by a duodenal perforation. Her medical history is significant for multiple sclerosis which has been stable on teriflunomide. She later developed inflammatory diarrhoea with ulcers shown in the caecum. Biopsies of the cecum and transverse colon at this time are submitted. Diagnosis? Drugs, bugs or immune thugs?

Case Presentation 2

Catherine Zilberg

Royal Prince Alfred Hospital, Camperdown, NSW, Australia

From dormant to dangerous: Three retrorectal masses in adults

No slide submitted

Abstract mini-oral presentation

Vivienne Lea

Liverpool Hospital, Liverpool, NSW, Australia

Fibroblast growth factor receptor (FGFR) alterations in metastatic colorectal cancer
